

```
public class StringConversionExample {  
    public static void main(String[] args) {  
        String originalString = "Hello, World!";  
        StringBuffer stringBuffer = new StringBuffer(originalString);  
        StringBuilder stringBuilder = new StringBuilder(originalString);  
        System.out.println("Original String: " + originalString);  
        System.out.println("String to StringBuffer: " + stringBuffer.toString());  
        System.out.println("String to StringBuilder: " + stringBuilder.toString());  
    }  
}
```
